

5 CHECKING AND VALIDATION RULES

The XML file used by ANCPI for the acceptance of the data coming from the systematic registration works, which are the subject of the registration in the cadastral and legal records, shall comply with the following requirements on structure and content:

5.1 Rules on the Parts of an immovable and the Belonging Relations between these

**Category
code:**

CADENT

Code	Description
CADENT-1	The parts of the immovable that are the subject of the Systematic Registration are: - The land, with its subdivision, the parcel. - The definitive construction - The individual unit
CADENT-2	The following relations hold between the parts of the immovable: - A definitive construction belongs to a single field; - An individual unit belongs to a single construction; - On a piece of land, there is one construction, there are more or no constructions; - In a construction, there may be several individual units (at least 2) or none
CADENT-3	The land and the parcels it is made up of have the following relationships: - A piece of land is made up of at least one parcel; - A parcel belongs to a single piece of land.
CADENT-4	The legal status of a piece of land (intravillan /extravillan area) shall be determined according to the legal status of the parcels which compose it. This is: - Intravillan: for land with all the parcels within the inner city area; - Extravillan : for land with all the parcels within the outer city area; - Indefinite: for land with parcels within both the inner city area and the outer city area.
CADENT-5	The sum of the measured parcel surfaces shall be equal to the measured land surface.
CADENT-6	The surface representing the footprint of a construction cannot be greater than the measured surface of the land (it is derived from topologic rules).

5.2 Rules on the Structure of the Parts of Immovable (Textual Attributes)

CADSTR-1 - The **land** attributes are:

Attribute	Description/ Comments	Mandatory
SIRUTA UAT code	SIRUTA code of the commune, town or municipality	Yes
Systematic Registration identifier	The identifier granted during the Systematic Registration work (under which the registration is performed)	Yes
Sporadic electronic identifier	The electronic identifier – it only exists for the land which has been entered in the electronic sporadic records	Yes, for those entered in the sporadic electronic records

Cadastral no.	The cadastral number, which is unique across the UAT – it only exists for the immovable entered in the cadastral and legal records. Those entered only in the old Land Book records do not have this identifier associated to them.	Yes, for those entered in the sporadic cadastral records.
Topographical no.	The topographical number under which the immovable was entered in the old Land Book records.	Yes, for those entered in the sporadic topographical records.
Land Book number	The number of the Land Book within which the immovable is recorded.	Yes, for those in the sporadic records
Cadastral sector	The number of the cadastral sector where the land is located.	Yes
It has its own Land Book	The land shall always be entered in its own Land Book.	Yes
The area as per measurements	The surface determined by topographical measurements .	Yes
The area in the deeds	The surface entered in the supporting documents underlying the entering in the records	
Tax value	The value with which the immovable is entered in the fiscal records for the calculation of the fees	
Legal conditions	Intravillan , extravillan area, indefinite	Yes
Address attributes		
Locality	The name of the locality	Yes, only in the case of the land located in the inner city area/intravillan
The type of the urban subunit	The type of administrative and urban subunit (neighbourhood, micro etc). It belongs to a classification.	
The name of the urban subunit	The name of the administrative and urban subunit	
The street	The type of street (the values belong to the “Street type” classification) The name of the street	
Post office cost		
Post office code		
Additional observations/ data		

CADSTR-2 - The **parcel** attributes are:

Attribute	Description/ Comments	
SIRUTA UAT code	SIRUTA code of the commune, town or municipality	Yes
Systematic Registration identifier	The identifier granted as part of the Systematic Registration work (under which the registration will be performed)	Yes

Sporadic electronic identifier	The electronic identifier – it only exists for the parcels belonging to the land which has been entered in the electronic sporadic records; this is a natural number from 1 to n, where n is the number of parcels belonging to the land	Yes, for those entered in the sporadic electronic records
Cadastral no.	Not applicable	
Topographical no.	Not applicable	
Land Book number	Not applicable	
It has its own Land Book	The parcel does not have its own Land Book.	Yes
The area as per measurements	The surface determined by topographical surveying.	Yes
The area in the deeds	Not applicable	
Tax value	The value with which the immovable is entered in the fiscal records for the calculation of the fees	
Legal conditions	Intravillan , extravillan area	Yes
The category of use	It belongs to a classification.	Yes
Property title no.	The number of the property title – if the parcel has been the subject of the restitution of land rights as per law 18/ 1991	If any
Tarla no.	The number assigned to the parcel which includes the parcel, in the records administered by the mayoralty.	If any
Parcel no.	The number assigned to the parcel in the records administered by the mayoralty.	If any

CADSTR-3 - The **construction** attributes are:

Attribute	Description/ Comments	Mandatory
SIRUTA UAT code	SIRUTA code of the commune, town or municipality	Yes
Systematic Registration identifier	The identifier granted as part of the Systematic Registration work (under which the public display will be performed)	Yes
Sporadic electronic identifier	The electronic identifier – it only exists for the constructions which have been entered in the electronic sporadic records	Yes, for those entered in the sporadic electronic records
Cadastral no.	The number under which the construction is represented at the level of the land in the cadastral records: 1, 2, ..., n (if any)	Yes, for those entered in the sporadic cadastral records.
Topographical no.	The number under which the construction is represented at the level of the land, in the topographical records (if any)	Yes, for those entered in the sporadic topographical records.
Land Book number	The number of the Land Book where the construction is entered	Yes, for those entered in the sporadic records.
It has its own Land Book	The condominium constructions and the constructions which have at least one other owner than the one of the field shall be entered in their own Land Books. All the other constructions do not have their own Land Book.	Yes

Surveying built area	The footprint area, as determined by topographical measurements.	Yes
The built area in the deeds	The footprint area, as written in the supporting documents underlying the registration in the records.	
Tax value	The value under which the construction is entered in the fiscal records in view of calculating the fees	
The purpose of the construction	It belongs to a classification.	Yes
The number of levels		Yes
Condominium construction (Yes/No)		Yes
The number of individual units		Yes, in the case of condominium constructions
Common spaces		Yes, in the case of condominium constructions
The existence or lack of documents regarding its edification		Yes
Address attributes		
Locality	The name of the locality	Yes
The type of urban subunit	The type of administrative and urban subunit (neighbourhood, micro etc).	
The name of the urban subunit	The name of the administrative and urban subunit	
The street	The type of street (the value belong to a ‘‘Street type’ classification) The name of the street	
Post office number		Yes
Building no.		
Post office code		Yes
Additional observations/ data		

CADSTR-4 - The **individual unit** attributes are:

Attribute	Description/ Comments	Mandatory
SIRUTA UAT code	SIRUTA code of the commune, town or municipality	Yes
Systematic Registration identifier	The identifier granted as part of the Systematic Registration work (under which the registration will be performed)	Yes
Sporadic electronic identifier	The electronic identifier – it only exists for the pieces of land which have been entered in the electronic sporadic records	Yes, for those entered in the sporadic electronic records

Cadastral no.	The cadastral number, which is unique across the UAT – it only exists for the individual units entered in the cadastral and legal records. Those entered only in the old Land Book records do not have this identifier associated to them.	Yes, for those entered in the sporadic cadastral records.
Topographical no.	The topographical number under which the immovable is entered in the old Land Book records.	Yes, for those entered in the sporadic topographical records.
Land Book number	The number of the Land Book within which the individual unit is recorded.	Yes, for those entered in the sporadic records.
It has its own Land Book	The individual units have their own Land Books.	Yes
Surveying area	The net area, as determined by topographical surveying.	Yes
The area in the deeds	The net area, as entered in the supporting documents underlying the registration in the records.	
The tax value	The value under which the immovable is registered in the fiscal records in view of calculating the fees	
The quota in the common use spaces	The share in the common use spaces, as represented as a fraction.	Yes
The quota of the land	The share of the land, as represented as a fraction.	Yes
No. of rooms		Yes
Address attributes		
Locality	The name of the locality	Yes
The type of urban subunit	The type of administrative and urban subunit (neighbourhood, micro etc).	
The name of the urban subunit	The name of the administrative and urban subunit	
The street	The type of street (the values belong to the “Street type” classification)	
	The name of the street	
Post office number		Yes
Building no.		
Wing number		
Entrance number		
Floor number		
Apartment number		Yes
Post office code		Yes
Additional observations/ data		

5.3 Rules regarding Graphical Representation

Category code:	CADGRF
----------------	--------

Code	Description
CADGRF-1	The land and constructions are the sole components of the immovable which are subject to graphical representation, which involves presenting their outline as a polygon in a unique graphical environment.
CADGRF-2	The national representation system is Stereographic '70.
CADGRF-3	The coordinates belonging to a polygon are represented by means of pairs of positive values along the North and East axes.
CADGRF-4	The limits of the inner city areas, UATs and counties are the subject of the graphical representation.

5.4 Rules regarding the Numbering of the Immovable Components in the Systematic Registration Records

Category code:	CADNUM
Code	Description
CADNUM-1	The pieces of land shall be numbered using natural, consecutive and ascending numbers starting from 1 for the pieces of land which is part of the same UAT.
CADNUM-2	The parcels shall be numbered using natural, consecutive and ascending numbers solely at the level of parcels belonging to same land. The numbering shall start at 1 for the parcels which belong to the same land.
CADNUM-3	The constructions shall be numbered starting from the land identifier, as follows: <i>land cadastral number</i>-C<<i>n</i>> where: <i>land cadastral number</i> = cadastral electronic number of the land on which it is located (it has to exist), as unchanged over time; <i>n</i> – positive, ascending integer, unique at the level of the constructions on a piece of land, as unchanged over time.
CADNUM-4	The individual units shall be numbered starting from the construction identifier, as follows: <<i>land cadastral number</i>>-C<<i>n</i>>-U<<i>m</i>> where: <i>land cadastral number</i> = cadastral electronic number of the land on which it is located (it has to exist), as unchanged over time; <i>n</i> - positive, ascending, integer, unique at the level of the constructions on a piece of land, as unchanged over time; <i>m</i> - positive, ascending, integer, unique at the level of the constructions on a piece of land, as unchanged over time
CADNUM-5	The immovable entered in the electronic sporadic records shall keep the electronic identifiers under which it appears in these records.

5.5 Topology Rules in the Representation of Graphical Data

Category code:	CADTOP
Code	Description
CADTOP-1	There can be no overlaps or empty spaces between two adjoining outlines (with at least one common limit) belonging to the pieces of land.
CADTOP-2	The topology between the layers: - A piece of land may contain as a whole one, several or no constructions; - A cadastral sector contains one, several or no pieces of land; - A region within the intravillan area contains one, several or no pieces of land; - A UAT contains one or several regions within the intravillan area; as an exception, if the

	regions within the intravillan area are not represented, the intravillan area land shall be directly comprised by UAT – the rule which is overall valid for the extravillan area land;
CADTOP-3	The topology within the layers: <u>Land</u> - There can be no overlaps or empty spaces between two adjoining pieces of land; <u>Constructions</u> - There can be no overlaps between the outlines of any two constructions on a piece of land; <u>Intravillan y area regions</u> - There can be no overlaps between any two intravillan area zones <u>UAT</u> - There can be no overlaps between any two UATs
CADTOP-4	The topology between the layers: <u>Land - Construction</u> - The constructions may or may not be fully comprised by the land entity they belong to; - The constructions have at least one point within the land they belong to; - Within a piece of land, there may be one or several constructions; <u>Land – Intravillan area</u> - There are no rules <u>UAT – Intravillan area</u> - All the intravillan area zones shall be comprised within the UAT they belong to

5.6 Rules regarding the Relationships between the Immovable Components and the Registrations

Category code: CADCF

Code	Description
CADCF-1	The components of the immovable which are the subject of the registration in the Land Book are: the land, the permanent construction and the individual unit. The parcel, as a subdivision of the land, is described in the Land Book, but it is not the subject of the association between the registration of rights and other notations.
CADCF-2	Each component of the immovable may be associated with one or several registrations, whereas the registration of a right may be associated to one or several components of the immovable. The only case when the registration may be associated, as part of a Land Book, with several components of the immovable is when it refers to a piece of land and countless constructions on it. A registration may not be associated with a piece of land and an individual unit as, for each of these, its own Land Book will be opened; in this case, 2 distinct registrations will be created, one of them connected to the land and the other one to the construction.
CADCF-3	Each immovable shall have at least one associated registration i.e. that of the property right, excepting the condominium constructions. For each property right, the quota will be specified. The sum of the quota for the registrations of the property rights in terms of make-up of the immovable shall be of 1/1. Such cases as when the owner is not identified shall be distinctly marked by mentioning the word “UNIDENTIFIED” as a name belonging to it and by filling in the field devoted to CNP/CF (CNP - personal number code) with 13 zeros (‘0000000000000’). CNP/CUI (personal number code/ unique registration code) shall be filled in with thirteen ‘9’s (‘9999999999999’) in the following cases: - CNP/CF is entered correctly (as in the documents), but it does not comply with the validation algorithm; - CNPI/CF is not known, although the name of the person is known (it does not appear in the documents or the person has no associated number of this type – see the case of the elderly).

CADCF-4	The condominium constructions have no associated property rights, and, in their case, the subject of the property is represented by the individual units and the common use spaces.
CADCF-5	The constructions without deeds have no associated registration considering the fact that they are not the subject of the registration in the Land Book.

5.7 Rules regarding the structure of the registrations

CFSTR-1	Any registration shall be performed based on a single deed.
CFSTR-2	Based on the same deed, one or several registrations may be performed. These shall be presented alternately.
CFSTR-3	The registrations may be: temporary registrations, land registrations, registrations of the possession or notations.
CFSTR-4	Depending on the type of registration, certain attributes thereof are mandatory – see the description of the registration attributes.
CFSTR-5	The amount of the current quota associated with the property right over any component of an immovable that is subject to the registration in the Land Book shall be 1/1.
CFSTR-6	The registrations, save for notations, shall be in favour of a title holder or another immovable (the case of the easement) – see the right classification.

CFSTR-7 – The attributes of the registration are:

Attribute	Description/ Comments	Mandatory
Land Book Part	The part in the Land Book to which the registration belongs.	Yes, for those in the sporadic records
Position	The no. of the position in the part of the Land Book where the registration is entered. A natural, ascending, unique no. at the level of each part.	Yes, for those in the sporadic records
Entry no.	The number of the request based on which the entry was added.	Yes, for those in the sporadic records
The date of the entry	The date of the request based on which the registration was performed.	Yes, for those in the sporadic records
The type of registration	The potential values belong to the “Registration type” classification.	Yes
Deed	Details on the document based on which the registration is made: - the type of the document – the potential values belong to the “Document type” classification; - the number of the document; - the date of the document; - the name of the issuing authority; - the value of the document; - the currency for the value; - additional details.	Yes
The type of right	The potential values belong to the “Right type” classification.	Yes, for the registrations of the type: temporary registration, land registration and possession registration.
Details on the right	Additional details on the registration of a right	

Note text	The text of the note if the type of entry is notation.	Yes, for notation entries
The means of acquiring the right	The potential values belong to the “Means of acquisition” classification.	Yes, for certain rights – see the “Right type” classification
Initial quota	The initial quota in relation to which the right was held	<i>Yes, for those in the sporadic records</i>
The current quota	The current quota in relation to which the right is held.	Yes, for certain rights – see the “Right type” classification
The value	The value of the encumbrance entered in the Land Book	Yes, for certain rights – see the “Right type” classification
The currency	The currency in which the encumbrance currency is expressed	Yes, for certain rights – see the “Right type” classification
Comments	Observations	
The status of the registration	Active/ Inactive	Yes, for those in the sporadic records
